EasyCo Publishes detailed performance benchmarks for Mtron Flash SSDs

EasyCo LLC, the developers of "Managed Flash Technology" and a North American distributor for Mtron Flash SSDs, has just completed detailed performance testing on Mtron drives, both as single drives and in RAID-5 arrays. These tests provide concrete performance numbers for using Mtron drive in performance critical applications such as database and transaction servers, as well as in more widely used products such as Laptops.

Of special interest will be confirmation that Flash SSDs operate differently in RAID-5 arrays. Hard drives running RAID-5 normally perform significantly slower than those configured RAID-10. With Flash, RAID-5 and RAID-10 perform virtually identically.

The benchmark white paper is available at:
